📍 Buenos Aires, Argentina · Remote (GMT-3)

■ SUMMARY

Senior Product Designer with 10+ years across product design, UX, UI and research. I design AI copilots and agent workflows for work where decisions carry real risk, and I design the AI's behaviour as carefully as the screens: autonomy levels, confidence, failure states and audit trails, so people stay in control. Most recently I owned an AI claims copilot for ~500 insurance adjusters, from research to handoff.

Top skills: Product design · AI product design · Figma · Design systems · User research

■ SELECTED RESULTS

-68%

claim resolution time with ClaimPro, from weeks to days (client-reported)

90%+

adoption among ~500 adjusters within two months of launch

+56%

B2B sales growth after launching Off Dep, with +65% Business accounts

■ EXPERIENCE

Product Designer — **Perficient**

Jan 2024 – 2025 · Remote

- Owned **ClaimPro** end to end, an AI claims copilot for a US insurance claims administrator: research, flows, AI behaviour, prototypes and handoff.
- Worked with a PM, a BA, 4 developers, QA and 2 visual designers over about six months.
- Led 20 interviews across the roles in the system and turned the findings into an AI-ranked Command Center, AI claim intake and an execution plan for every claim.
- Designed autonomy as a setting: the AI drafts and a person approves by default; anything below 85% confidence goes to human review.
- Result: **-68% resolution time** (client-reported, 3 months) and **90%+ adoption**. It became the company standard.
- Designed **Vantage**, a multi-agent AI platform for a neobank's anti-money-laundering team: agents prepare each case and a named analyst signs every decision.

Senior UX/UI Designer — **Perficient**

Jan 2022 – Jan 2024 · Remote

- Product designer of **Off Dep Business**, a self-service B2B purchasing platform for a major US office-supply retailer, over about six months.
- Ran 20 interviews with Business buyers and designed roles, budgets and approvals inside one company account.
- Designed the AI purchasing assistant and approval verdicts with confidence, budget impact and policy checks.
- Result after launch: **+65% Business accounts**, **+56% B2B sales** and **+47% account retention**.
- Enterprise SaaS, admin systems and data-heavy workflows, including work for a global logistics company.

Senior Visual Designer — **Perficient**

Oct 2019 – Jan 2022 · Buenos Aires

Built and scaled Perficient's Advanced Design System: visual standards and a reusable component library that improved consistency and design-to-development handoff.

Product Designer — **Distrito Moda**

Apr 2017 – Jan 2019 · Buenos Aires

End-to-end design, from user research to an implementation-ready handoff, of a multi-sided fashion e-commerce platform for retail and wholesale buyers.

UX Designer — **Tsserapp**

Mar 2015 – Jan 2017 · Venezuela

■ **SELECTED CASE STUDIES**

Full case studies at aranzaisea.netlify.app

ClaimPro

Launched

AI claims copilot for insurance adjusters. Human-in-the-loop by design.

Off Dep

Launched

AI-assisted B2B purchasing: recommendations, budget checks and approvals.

Club Rumbo

Launched

Fuel-station loyalty MVP shipped in one month, iOS and Android.

Vantage

Launched

Multi-agent AI platform for anti-money-laundering compliance.

Numi

Concept

AI meal planner for iOS, with a Human-AI (HAX) audit.

Relay

Launched

Enterprise AI copilot with per-role permissions and auditable autonomous actions.

Approach

I don't run the same playbook twice. For every project I start with a diagnostic based on the goal, scope and information already available, then build a methodology plan tailored to it, always grounded in user-centered design.
